TEAM: Will Code For Food
ROSTER: Emily Zhang, Michael Lin, Yaru Luo

APIs
- **FoodData Central**: food nutrient profiles and descriptions
- **Zomato**: restaurant names, cuisines, and locations
- **Recipe Puppy**: recipe book

Core Components
  A. Navigation Bar
     - Present on every page to easily log in/out, view home page, recipe book, restaurants, and food diary
  B. User Accounts
     - Users must register for an account and log in to create a food diary
        - Users with accounts can utilize the food diary stored list of inputted food (breakfast, lunch, dinner, snacks)
        - Can provide details on the foods that are inputted
     - Don't need to register to view recipes and restaurants
  C. Recipe Book
     - Users can view recipes using a search form and will select for the type of search through a drop down menu
        - Returns recipe ingredients, website URL
  D. Restaurants Nearby
     - Users can view restaurants nearby using a search form and will select for the type of search through a drop down menu
        - Returns website URL, cuisine type, address
  E. Food diary
     - Users will be allowed to create multiple entries everyday
        - Owner of the diary allowed to add/edit/delete posts
        - Each post will display date, content, nutrition data, and restaurants
     - Users can use the search bar and add food along with nutrients data

Optional Components **(if we have time)**
- Implement Taco Fancy API for taco recipes
- Implement advanced searching for nutrients to utilize other fields in FoodData Central API
- Automatic recipe processing for food diary entries
- Use that quotes API to have motivational quotes about eating healthy or food
- User profile, which will contain user info and the ability to change password
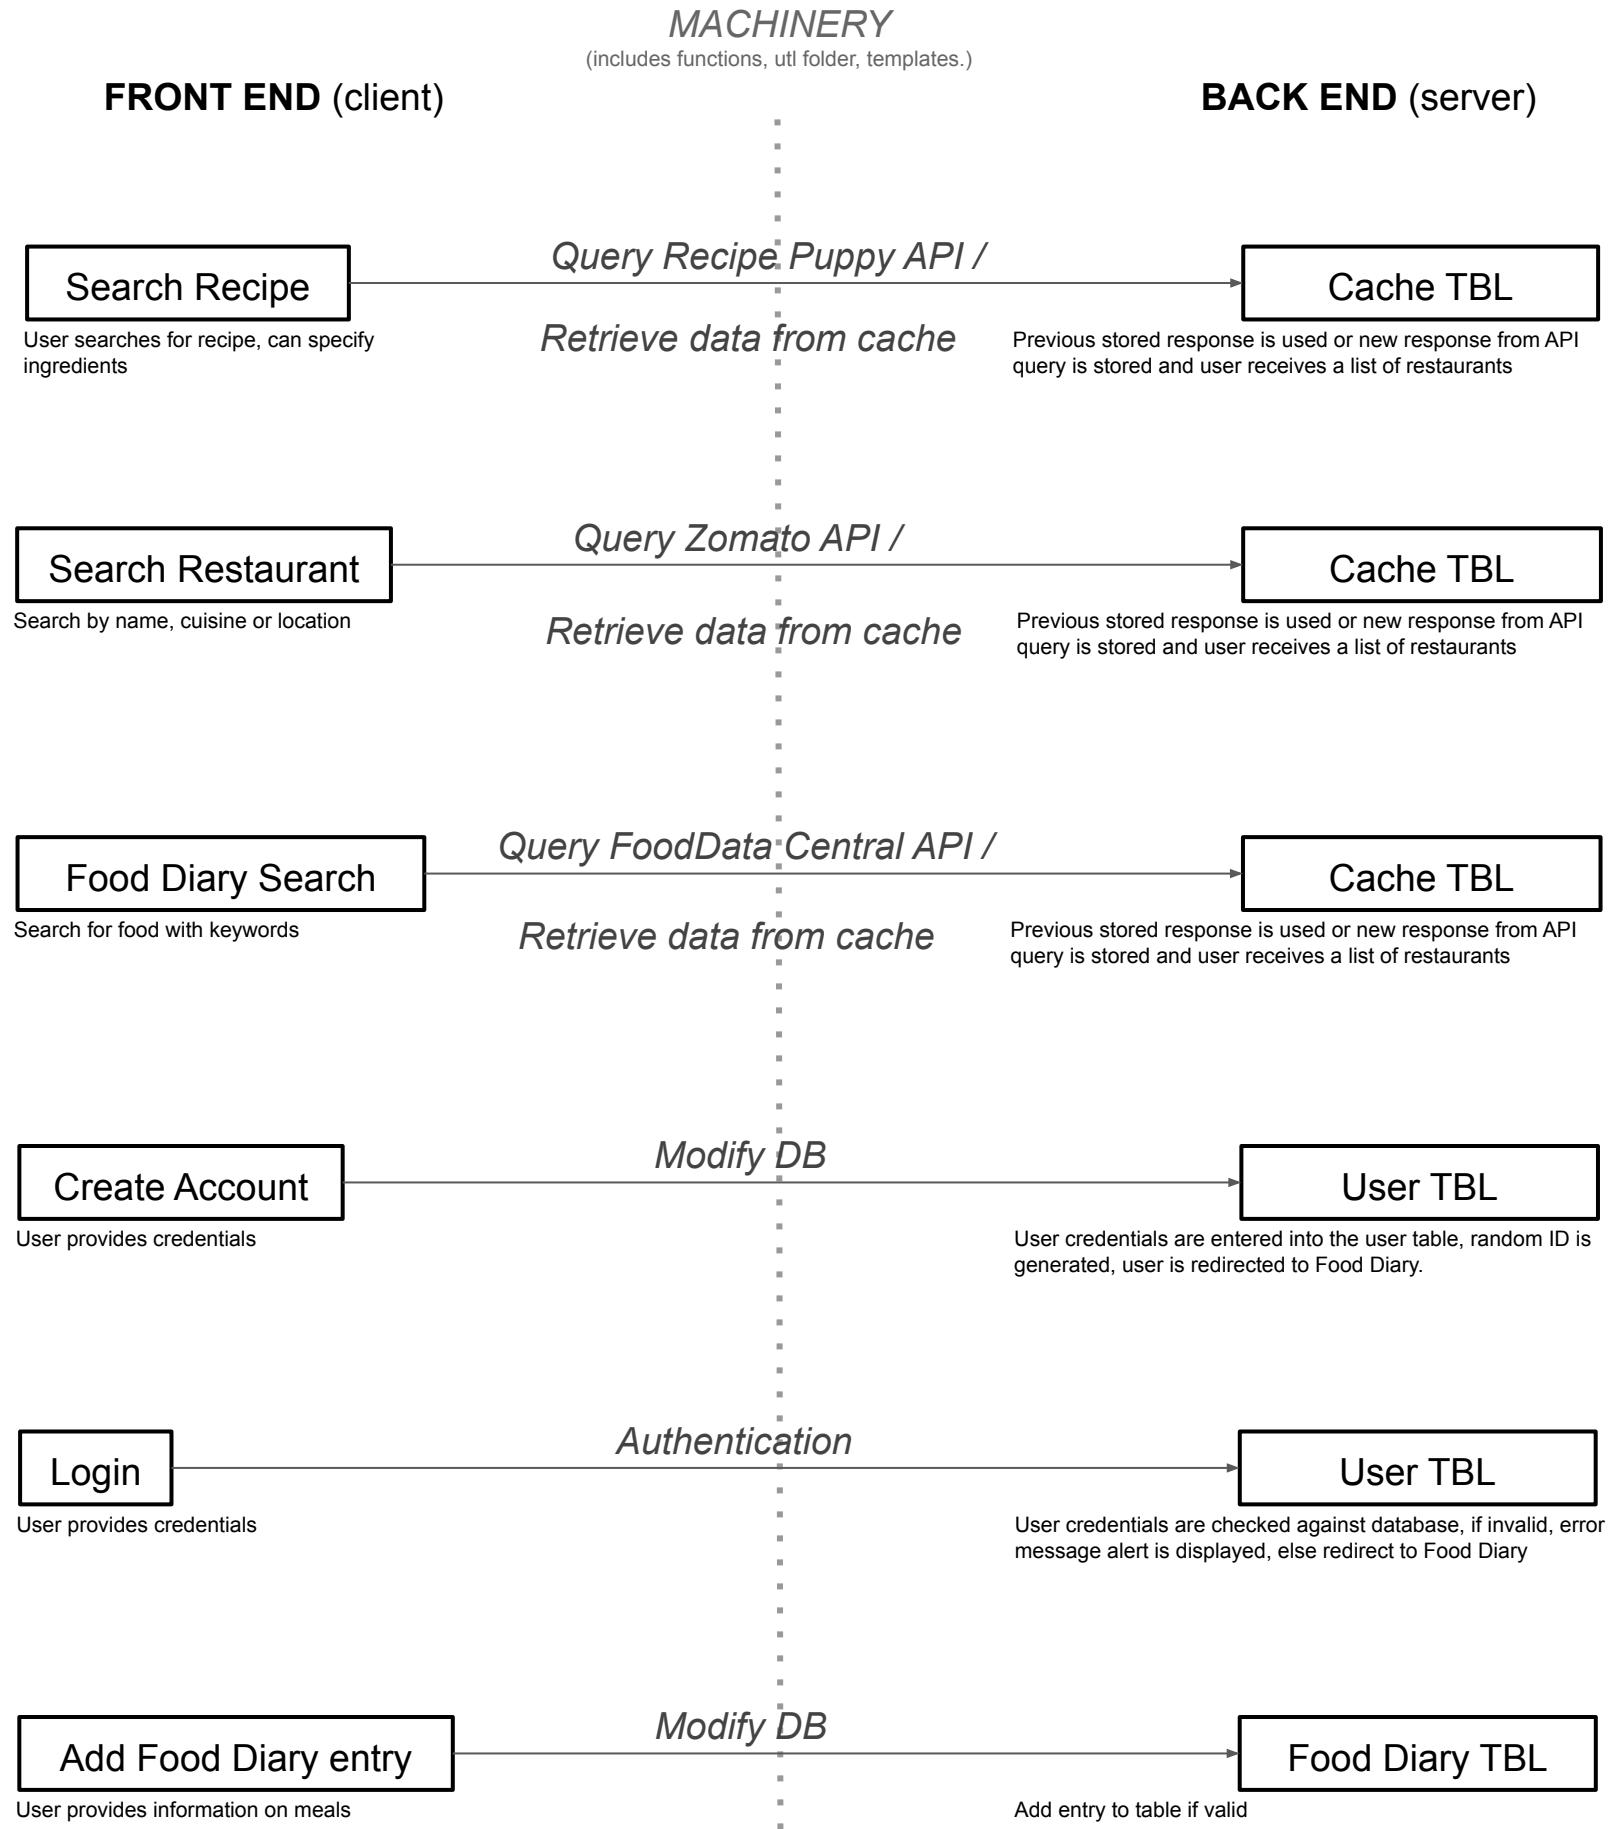

Communication App: Slack

Breakdown of Tasks

<u>TASKS</u>
   A.   Project Manager (Michael)
       -   Oversees project development
       -   Help with frontend/backend development
       -   Updates devlog and design doc
   B.   Frontend (Emily)
       -   Creates HTML templates and pages according to sitemap
       -   Jinja
       -   Bootstrap
   C.   Backend (Yaru)
       -   Write Python scripts to handle requests to modify or retrieve data from databases and APIs using SQLite
       -   Flask framework
       -   Integrate code from the last project for the login features

Component Map

FRONT END (client)   **BACK END** (server)

Search Recipe	*Query Recipe Puppy API /*	Cache TBL

User searches for recipe, can specify
ingredients

Retrieve data from cache

Previous stored response is used or new response from API
query is stored and user receives a list of restaurants

Search Restaurant	*Query Zomato API /*	Cache TBL

Search by name, cuisine or location

Retrieve data from cache

Previous stored response is used or new response from API
query is stored and user receives a list of restaurants

Food Diary Search	*Query FoodData Central API /*	Cache TBL

Search for food with keywords

Retrieve data from cache

Previous stored response is used or new response from API
query is stored and user receives a list of restaurants

Create Account	*Modify DB*	User TBL

User provides credentials

User credentials are entered into the user table, random ID is
generated, user is redirected to Food Diary.

Login	*Authentication*	User TBL

User provides credentials

User credentials are checked against database, if invalid, error
message alert is displayed, else redirect to Food Diary

Add Food Diary entry	*Modify DB*	Food Diary TBL

User provides information on meals

Add entry to table if valid
